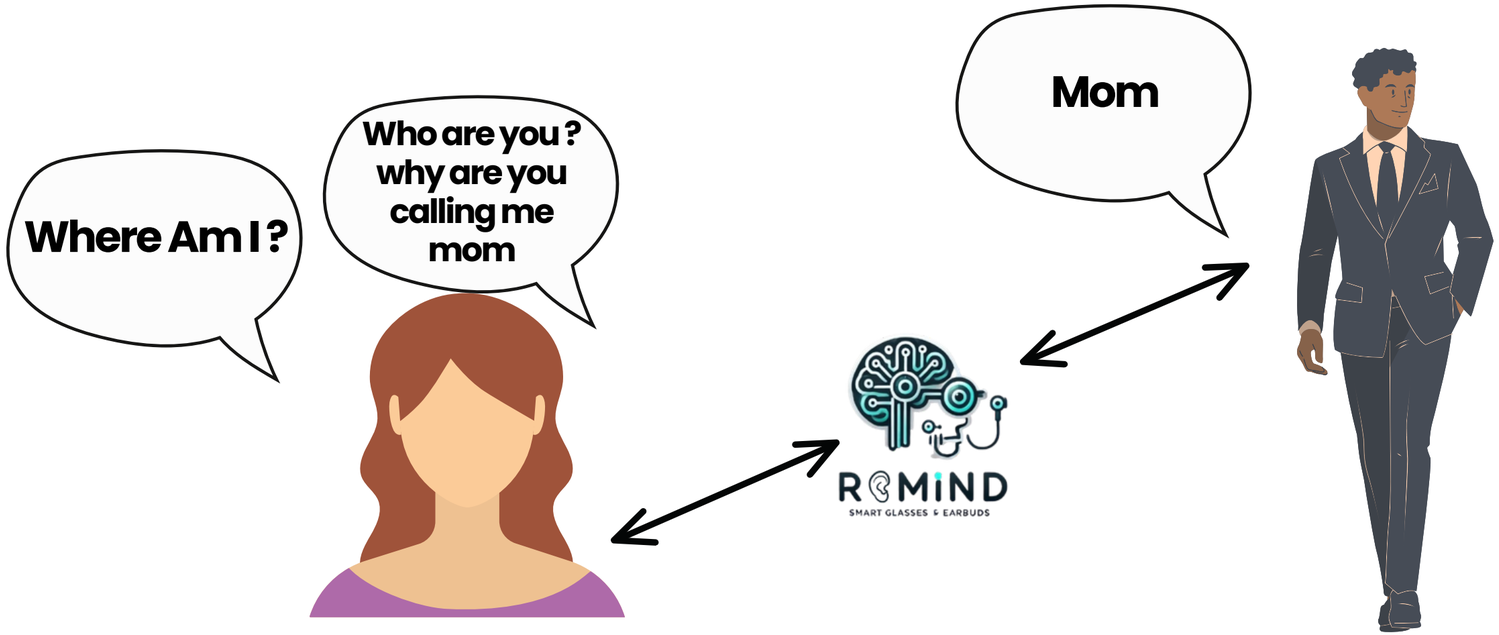
ReMind

SMART GLASSES & EARBUDS

ReMind isn't just a device—it's a revolution in independent living.

Storytelling – A Real-Life Scenario



Meena, Age : 72

Ravi, a working Professional

REMIND

ReMind isn't just a device—it's a revolution in independent living.

PROBLEM

India has over **5.3 million Alzheimer's patients,** and nearly **90%** depend solely on family **caregivers**

Despite **millions of Alzheimer's patients in India,** there is a **major lack of affordable, technology-driven tools** for **memory support** and **caregiver assistance.**

OUR SOLUTION

Smart Wearable Support:
Wearable Bag (Camera) + earbuds (audio cues).

Memory Support:
Announces known faces; alerts caregiver for unknown.

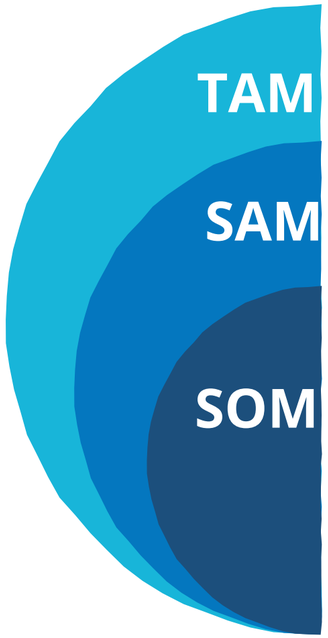
Built-In Map & Geofencing
live location Monitors; Assist Route Suggestion

Caregiver Alerts:
Monitors wear; alerts if removed; live

Personalized Multilingual Reminders:
Sends reminders; tracks and notifies if missed.

FEASIBILITY AND VIABILITY

MARKET FEASIBILITY



Total Addressable Market

India has a large and growing elderly population. The assistive healthcare market is expanding rapidly due to increasing dementia and Alzheimer's cases.

Target Segment (AI-driven Alzheimer's Assistive Devices – SAM):

We focus on AI-powered Alzheimer's assistive devices for elderly people who need daily monitoring and support.

Serviceable Obtainable Market (SOM):

We initially target a small percentage of elderly dementia patients in urban areas, with plans to scale across India.

TECHNICAL FEASIBILITY

Ready-to-use hardware (Raspberry Pi, sensors, camera, Bluetooth) **+ mobile & cloud AI.**
5.3M dementia patients in India; scalable to 50K+ users quickly.

FINANCIAL FEASIBILITY

Due to low-cost production

scalable cloud-based delivery, and recurring revenue from subscriptions, **B2B licensing**, and analytics.

OPERATIONAL FEASIBILITY

Easy-to-assemble standard **hardware, wide distribution channels, app-based support,** and **strong partnerships** with **hospitals/NGOs.**

IMPACTS ON TARGET AUDIENCE

Empowers patients

Supports **independent** living and daily functioning for **elderly and dementia users.**

Relieves caregivers

Reduces stress through **real-time monitoring and emergency alerts.**

Enhances safety

Minimizes risks of **wandering, disorientation**, and missed health issues.

Drives innovation & inclusivity

Promotes **AI/IoT** in healthcare while aligning with **SDGs** (health, equality, innovation).

SUSTAINABLE DEVELOPMENT GOALS

BUSINESS MODEL

Revenue streams

- **Subscription model**

Monthly or yearly plans for AI assistance and health tracking.

- **B2B Partnerships**

Collaborations with hospitals and care facilities.

- **Device Sales**

One-time purchase of the wearable device.

Value Propositions

Real-Time Memory Support & AI-driven Cognitive Assistance

Customer Segments

Main users are people with Alzheimer's Patients and Caregivers

Competitive Advantage
